

Site Audit: Full Report

aipivot.com.au

Here is a summary of your site audit report:

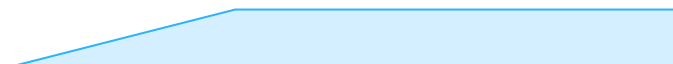

- Your website's overall technical health is currently at 92%, and its AI Search Health, which indicates how well it is optimized for AI search engines, is also at 92%. These scores have remained stable.
- Out of the 46 pages crawled on your website, 44 pages, representing 95.7% of your site, currently have technical issues. Only 1 page (2.2%) is functioning without any problems, and 1 page (2.2%) is broken.
- There is one critical error on your website: one page is returning a 5XX status code. This means there is a server problem preventing users and search engines from accessing that page, which can negatively impact user experience and how search engines find your content.
- Your website has 158 warnings. Key areas for improvement include:
 - 42 pages are missing a main title (H1 heading). These headings are important for both search engines to understand your content and for users to quickly grasp what a page is about.
 - 32 pages have titles that are too long. Search engines often shorten these in search results, making them less appealing for users to click.
 - 42 pages have a low text-to-HTML ratio. This means there is too much code compared to the actual text content, which can affect how quickly pages load and how search engines evaluate content quality.
 - 42 pages have a low word count, with less than 200 words. Pages with more comprehensive content are generally preferred by search engines as they provide more information to users.
- There are also a few notices to address:
 - 3 pages listed in your sitemap (a map of your website for search engines) are "orphaned," meaning they are not linked from other pages on your site. This can make them harder for search engines to discover.
 - One of your subdomains does not support HSTS (HTTP Strict Transport Security), which is a security measure that ensures browsers connect to your site securely.
 - There is a formatting issue with your llms.txt file, which can affect how AI search engines interpret your website's content.

This report provides a snapshot of current activity. Deeper trend analysis will become more reliable with a longer data history.

Errors

Errors

Project name: aipivot.com.au

Errors	Amount
1 page returned a 5XX status code	1
About this issue:	0
5xx errors refer to problems with a server being unable to perform the request from a user or a crawler. They prevent users and search engine robots from accessing your webpages, and can negatively affect user experience and search engines' crawlability. This will in turn lead to a drop in traffic driven to your website.	
How to fix:	
Investigate the causes of these errors and fix them.	
0 pages returned 4XX status code	0
	0
0 pages don't have title tags	0
	0
0 issues with duplicate title tags	0
	0
0 pages have duplicate content issues	0

Warnings

Warnings

Project name: aipivot.com.au

Warnings	Amount
42 pages don't have an h1 heading About this issue: While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly. How to fix: Provide a concise, relevant h1 heading for each of your page.	42 0
42 pages have low text-HTML ratio About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	42 0
42 pages have a low word count About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.	42 0

Warnings	Amount
32 pages have too much text within the title tags About this issue: Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article How to fix: Try to rewrite your page titles to be 70 characters or less.	32 0
0 external links are broken	0
0 external images are broken	0
0 links on HTTPS pages lead to HTTP page	0
0 pages don't have enough text within the title tags	0

Notices

Notices

Project name: aipivot.com.au

Notices	Amount
3 orphaned pages in sitemaps About this issue: An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally. How to fix: Review all orphaned pages in your sitemap.xml files and do either of the following: - If a page is no longer needed, remove it - If a page has valuable content and brings traffic to your website, link to it from another page on your website - If a page serves a specific need and requires no internal linking, leave it as is	3 0
1 subdomain doesn't support HSTS About this issue: HTTP Strict Transport Security (HSTS) informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support. How to fix: Use a server that supports HSTS.	1 0
Llms.txt has formatting issues About this issue: If your <code>llms.txt</code> file is incorrectly formatted, AI search engines that use it may interpret your website's content less accurately. How to fix: Review your <code>llms.txt</code> file and fix all issues. Visit llmstxt.org to find out how to properly format your file.	1 0
0 pages have more than one H1 tag	0 0

Detailed Issue: Warnings

Detailed Warnings

Low text to HTML ratio

Project name: aipivot.com.au

Detailed Issue Description

About this issue:

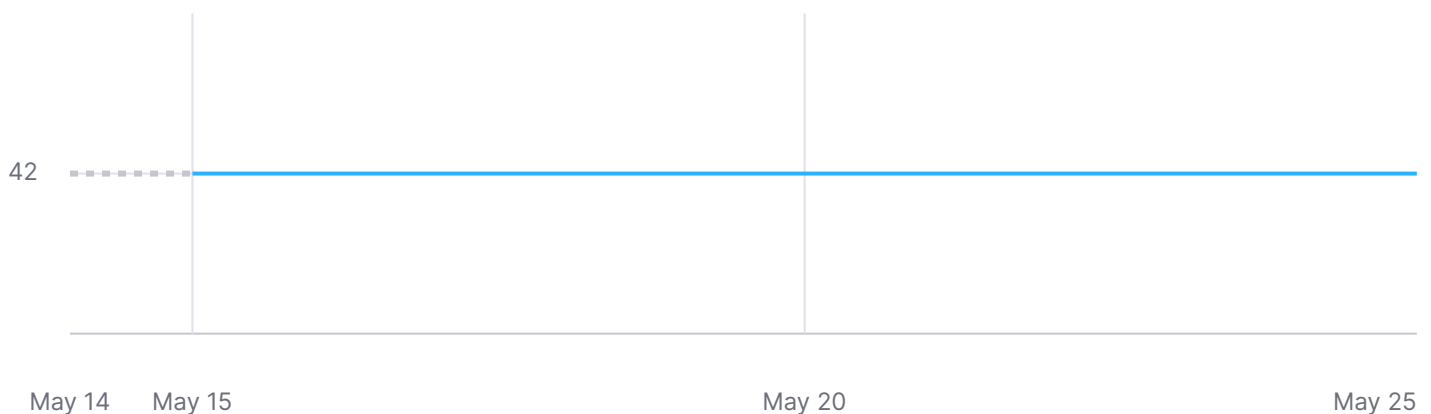

Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less.

Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results.

Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster.

How to fix:

Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

Low word count

Detailed Issue Description

About this issue:

This issue is triggered if the number of words on your webpage is less than 200.

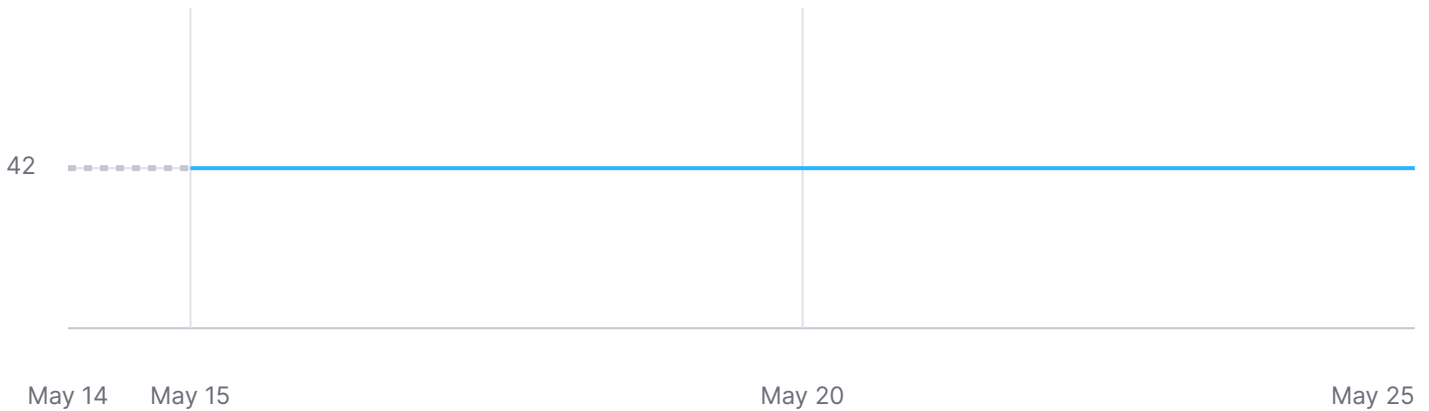

The amount of text placed on your webpage is a quality signal to search engines.

Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts.

For more information, please view [this video](#)

How to fix:

Improve your on-page content and be sure to include more than 200 meaningful words.

Missing h1

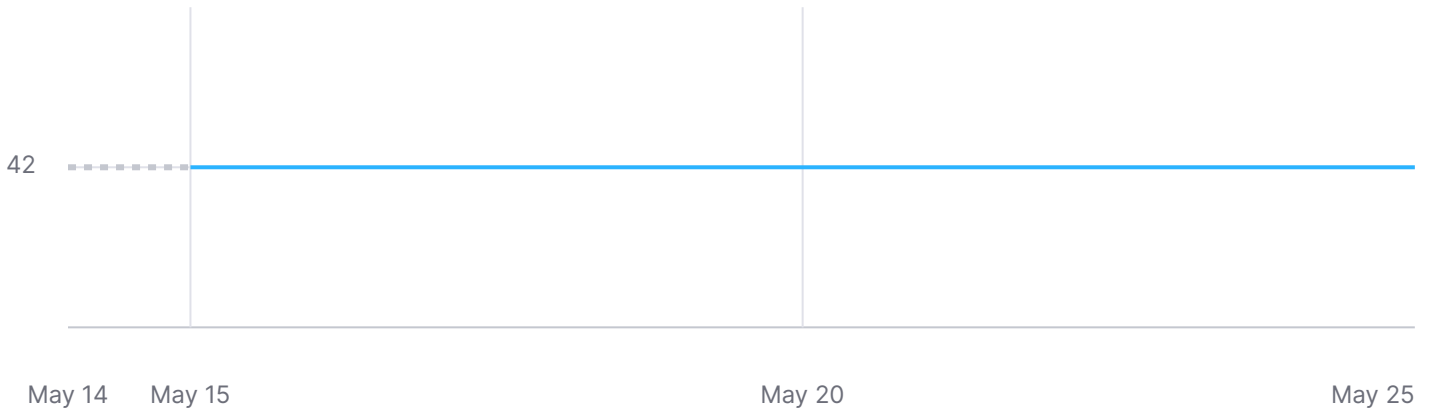

Detailed Issue Description

About this issue:

While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly.

How to fix:

Provide a concise, relevant h1 heading for each of your page.

Long title element

Detailed Issue Description

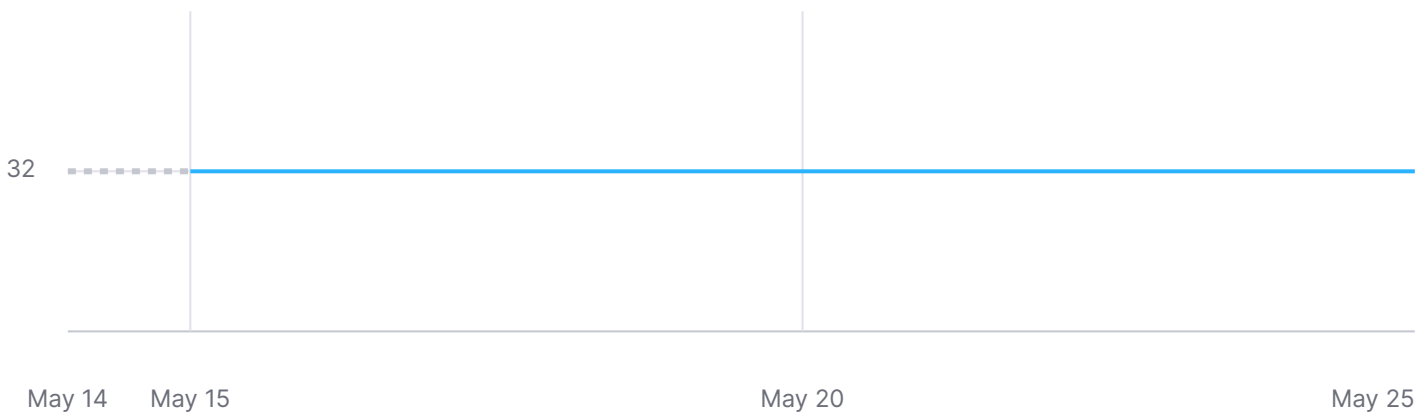

About this issue:

Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page.

For more information, please see [this Google article](#)

How to fix:

Try to rewrite your page titles to be 70 characters or less.

Detailed Issue: Notices

Detailed Notices

Orphaned sitemap pages

Project name: aipivot.com.au

Detailed Issue Description

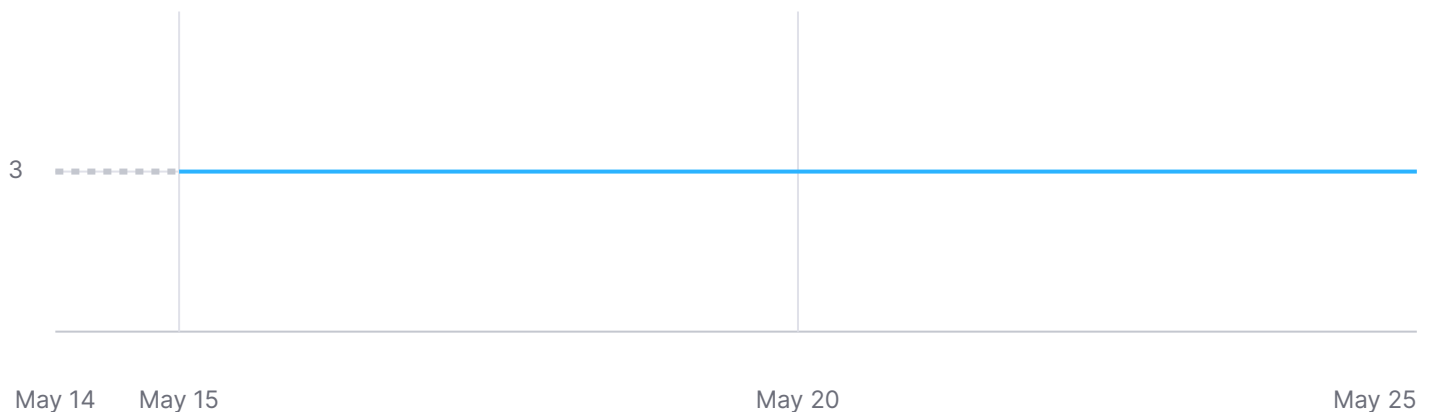

About this issue:

An orphaned page is a webpage that is not linked to internally. Including orphaned pages in your sitemap.xml files is considered to be a bad practice, as these pages will be crawled by search engines. Crawling outdated orphaned pages will waste your crawl budget. If an orphaned page in your sitemap.xml file has valuable content, we recommend that you link to it internally.

How to fix:

Review all orphaned pages in your sitemap.xml files and do either of the following:

- If a page is no longer needed, remove it
- If a page has valuable content and brings traffic to your website, link to it from another page on your website
- If a page serves a specific need and requires no internal linking, leave it as is

No HSTS support

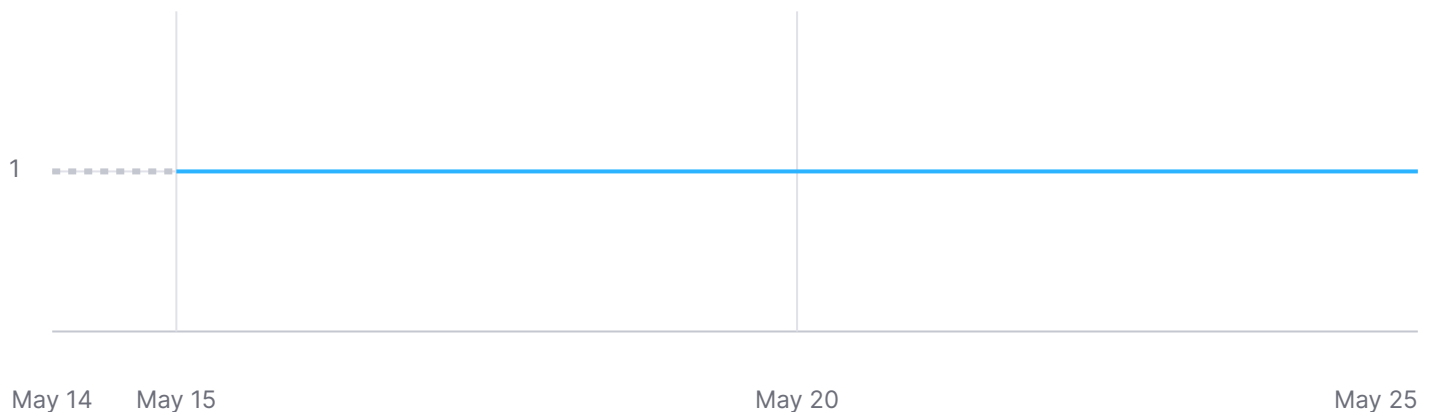

Detailed Issue Description

About this issue:

HTTP Strict Transport Security (HSTS) informs web browsers that they can communicate with servers only through HTTPS connections. So, to ensure that you don't serve unsecured content to your audience, we recommend that you implement HSTS support.

How to fix:

Use a server that supports HSTS.

lms.txt has formatting issues

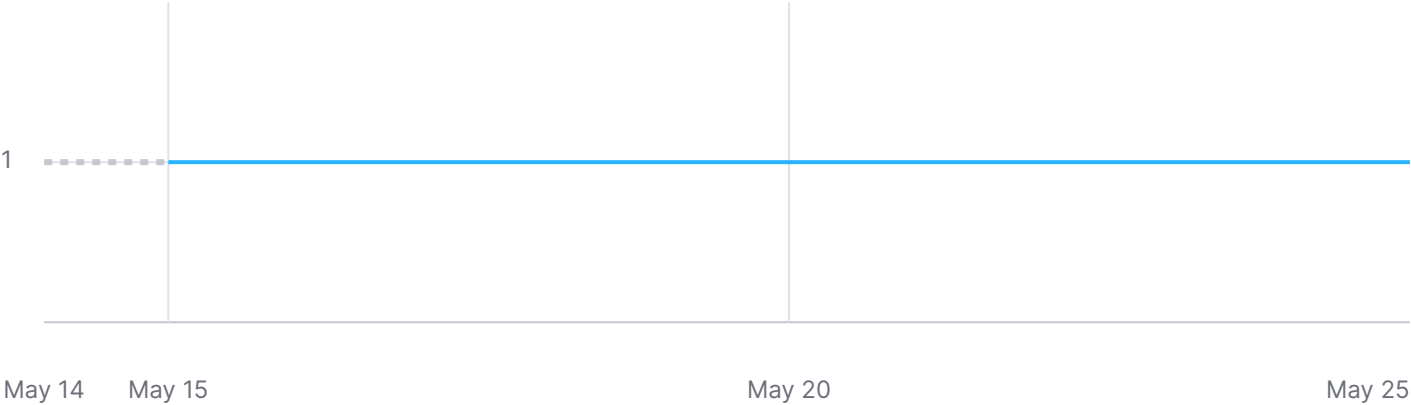

Detailed Issue Description

About this issue:

If your `lms.txt` file is incorrectly formatted, AI search engines that use it may interpret your website's content less accurately.

How to fix:

Review your `lms.txt` file and fix all issues. Visit lms.txt.org to find out how to properly format your file.
